

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): A polypropylene-based resin composition comprising:
0.5 to 10% by weight of a propylene-based polymer component (A1) obtained by
polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{A1}$
measured in tetralin at 135°C of 5 dl/g or more and a melting peak temperature T_m^{A1} measured
by a differential scanning calorimeter of 130 to 160°C; and
90 to 99.5% by weight of a propylene-based polymer component (A2) obtained by
polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{A2}$
measured in tetralin at 135°C of less than 5 dl/g, wherein the total amount of (A1) and (A2) is
100% by weight, wherein the polypropylene-based resin composition has a melt flow rate (MFR)
measured according to JIS-K-6758 of 5 to 150 g/10 minutes.

2. (original): The polypropylene-based resin composition according to Claim 1,
wherein the propylene-based polymer component (A2) comprises 50 to 94.5% by weight of a
propylene polymer component (B) having an intrinsic viscosity $[\eta]_P^{B_P}$ measured in tetralin at
135°C of 1.5 dl/g or less, and 5 to 40% by weight of a propylene-ethylene random copolymer
component (C) having an intrinsic viscosity $[\eta]_{EP}^C$ measured in tetralin at 135°C of 8 dl/g or less

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 10/087,710

and an ethylene content of 20 to 70% by weight, wherein the total amount of (A1), (B) and (C) is 100% by weight.

3. (currently amended): The polypropylene-based resin composition according to Claim 1, wherein the propylene-based polymer component (A2) is a polypropylene-based resin (D) ~~composed of:~~

~~the propylene polymer component (B) having an intrinsic viscosity $[\eta]_P^B$ measured in tetralin at 135°C of 1.5 dl/g or less and being a propylene-ethylene block copolymer (i) or a mixture (iii) of said propylene-ethylene block copolymers (i) and propylene polymers (ii); and~~

~~the propylene-ethylene random copolymer component (C) having an intrinsic viscosity $[\eta]_EP^C$ measured in tetralin at 135°C of 8 dl/g or less and an ethylene content of 20 to 70% by weight having an intrinsic viscosity $[\eta]_P^C$ of less than 5 dl/g, which is a propylene-ethylene block copolymer (i) composed of a propylene polymer component (B) having an intrinsic viscosity $[\eta]_P^B$ of 1.5 dl/g or less and a propylene-ethylene random copolymer component (C) having an intrinsic viscosity $[\eta]_EP^C$ of 8 dl/g or less and an ethylene content of 20 to 70% by weight, or a mixture (iii) of the propylene-ethylene block copolymer (i) and a propylene polymer (ii).~~

4. (currently amended): The polypropylene-based resin composition according to Claim 3 1, wherein the content of the propylene-based polymer component (A1) is from 0.52 to 9.8% by weight and the propylene-based polymer component (A2) is composed of 0.78 to 4.2% by weight of ~~the a~~ propylene polymer component (B) and 98.7 to 86% by weight of a polypropylene-based resin (D) ~~having an intrinsic viscosity $[\eta]_P^B$ of less than 5 dl/g, which is a propylene-ethylene block copolymer (i) composed of a propylene polymer component (B)~~

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 10/087,710

having an intrinsic viscosity $[\eta]_{\text{P}}^{\text{B}}$ of 1.5 dl/g or less and a propylene-ethylene random copolymer component (C) having an intrinsic viscosity $[\eta]_{\text{EP}}^{\text{C}}$ of 8 dl/g or less and an ethylene content of 20 to 70% by weight, or a mixture(iii) of the propylene-ethylene block copolymer (i) and a propylene polymer (ii), and wherein the total amount of (A1), (B) and (D) is 100% by weight.

5. (currently amended): A The polypropylene-based resin composition according to Claim 1 comprising:

0.5 to 10% by weight of a propylene-based polymer component (A1) obtained by polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{\text{A}1}$ measured in tetralin at 135°C of 5 dl/g or more and a melting peak temperature $T_m^{\text{A}1}$ measured by a differential scanning calorimeter of 130 to 160°C; and

90 to 99.5% by weight of a propylene-based polymer component (A2) obtained by polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{\text{A}2}$ measured in tetralin at 135°C of less than 5 dl/g, wherein the total amount of (A1) and (A2) is 100% by weight, wherein the propylene-based polymer component (A1) has an intrinsic viscosity $[\eta]^{\text{A}1}$ measured in tetralin at 135°C of 6 to 9 dl/g and a melting temperature peak $T_m^{\text{A}1}$ measured by a differential scanning calorimeter of 135 to 155°C.

6. (original): The polypropylene-based resin composition according to Claim 1, wherein the propylene-based polymer component (A1) is a random copolymer of propylene and ethylene, having an ethylene content of 1 to 7% by weight.

7. (original): The polypropylene-based resin composition according to Claim 2, wherein the propylene polymer component (B) has an intrinsic viscosity $[\eta]_{\text{P}}^{\text{B}}$ measured in

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 10/087,710

tetralin at 135°C of 0.7 to 1.5 dl/g and the propylene-ethylene random copolymer component (C) has an intrinsic viscosity $[\eta]_{EP}^C$ measured in tetralin at 135°C of 1.5 to 4 dl/g.

8. (original): The polypropylene-based resin composition according to Claim 3, wherein the propylene polymer component (B) has an intrinsic viscosity $[\eta]_P^B$ measured in tetralin at 135°C of 0.7 to 1.5 dl/g and the propylene-ethylene random copolymer component (C) has an intrinsic viscosity $[\eta]_{EP}^C$ measured in tetralin at 135°C of 1.5 to 4 dl/g.

9. (canceled).

10. (currently amended): A The polypropylene-based resin composition according to Claim 1 comprising:

0.5 to 10% by weight of a propylene-based polymer component (A1) obtained by polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{A1}$ measured in tetralin at 135°C of 5 dl/g or more and a melting peak temperature Tm^{A1} measured by a differential scanning calorimeter of 130 to 160°C; and

90 to 99.5% by weight of a propylene-based polymer component (A2) obtained by polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{A2}$ measured in tetralin at 135°C of less than 5 dl/g, wherein the total amount of (A1) and (A2) is 100% by weight, wherein the polypropylene-based resin composition has a molecular weight distribution Q value (Mw/Mn) measured by a gel permeation chromatography method of less than 10.

11. (currently amended): A The polypropylene-based resin composition according to Claim 1 comprising:

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 10/087,710

0.5 to 10% by weight of a propylene-based polymer component (A1) obtained by polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{A1}$ measured in tetralin at 135°C of 5 dl/g or more and a melting peak temperature T_m^{A1} measured by a differential scanning calorimeter of 130 to 160°C; and

90 to 99.5% by weight of a propylene-based polymer component (A2) obtained by polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{A2}$ measured in tetralin at 135°C of less than 5 dl/g, wherein the total amount of (A1) and (A2) is 100% by weight, wherein the polypropylene-based resin composition has a die swell of 1.6 or more.

12. (currently amended): A polypropylene-based resin composition comprising:
35 to 88% by weight of ~~a~~ the polypropylene-based resin composition of Claim 1 comprising:

0.5 to 10% by weight of a propylene-based polymer component (A1) obtained by polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{A1}$ measured in tetralin at 135°C of 5 dl/g or more and a melting peak temperature T_m^{A1} measured by a differential scanning calorimeter of 130 to 160°C; and 90 to 99.5% by weight of a propylene-based polymer component (A2) obtained by polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{A2}$ measured in tetralin at 135°C of less than 5 dl/g, wherein the total amount of (A1) and (A2) is 100% by weight,
0 to 20% by weight of a propylene homopolymer (F),
10 to 35% by weight of an elastomer (G), and

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 10/087,710

2 to 30% by weight of an inorganic filler(H).

13. (currently amended): An injection molded article made of ~~a~~ the polypropylene-based resin composition ~~according to any of Claims 1 to 11 comprising:~~

0.5 to 10% by weight of a propylene-based polymer component (A1) obtained by polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{A1}$ measured in tetralin at 135°C of 5 dl/g or more and a melting peak temperature T_m^{A1} measured by a differential scanning calorimeter of 130 to 160°C; and 90 to 99.5% by weight of a propylene-based polymer component (A2) obtained by polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{A2}$ measured in tetralin at 135°C of less than 5 dl/g, wherein the total amount of (A1) and (A2) is 100% by weight, wherein the polypropylene-based resin composition has a melt flow rate (MFR) measured according to JIS-K-6758 of 5 to 150 g/10 minutes.

14. (currently amended): A process for producing ~~the~~ a polypropylene-based resin composition ~~of Claim 4~~, comprising mixing 98.7 to 86% by weight of ~~the~~ a polypropylene-based resin(D) with 1.3 to 14% by weight of a master batch(E) comprising 40 to 70% by weight of ~~the~~ a propylene-based polymer component (A1) and 60 to 30% by weight of ~~the~~ a propylene polymer component (B), wherein the propylene-based resin (D) has an intrinsic viscosity $[\eta]_P$ of less than 5 dl/g and is a propylene-ethylene block copolymer (i) composed of a propylene polymer component (B) having an intrinsic viscosity $[\eta]_P^{B}$ of 1.5 dl/g or less and a propylene-ethylene random copolymer component (C) having an intrinsic viscosity $[\eta]_{EP}^C$ of 8 dl/g or less and an ethylene content of 20 to 70% by weight, or a mixture(iii) of the propylene-ethylene

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. Appln. No. 10/087,710

block copolymer (i) and a propylene polymer (ii), wherein the propylene-based polymer component (A1) is a component obtained by polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{A1}$ measured in tetralin at 135°C of 5 dl/g or more and a melting peak temperature Tm^{A1} measured by a differential scanning calorimeter of 130 to 160°C.

15. (original): A master batch comprising 40 to 70% by weight of a propylene-based polymer component (A1) obtained by polymerizing a monomer mainly composed of propylene, having an intrinsic viscosity $[\eta]^{A1}$ measured in tetralin at 135°C of 5 dl/g or more and a melting peak temperature Tm^{A1} measured by a differential scanning calorimeter of 130 to 160°C and 60 to 30% by weight of a propylene polymer component (B) having an intrinsic viscosity $[\eta]^{B_P}$ measured in tetralin at 135°C of 1.5 dl/g or less.
